🔷 How To Use

You have to configure it from wp-admin > CF7 User Registration > Settings (Contact Form 7 needs to be activated first) to use this plugin.

01 Select Registration Form

Select the form for User Registration.

02 Enable Registration Form

This feature is used for enabling registration forms temporarily.

03 Enable Auto Login After User Registration

If this checkbox is checked, the user will auto login to the website after registration.

04 Skip Contact Form 7 Email

Tick the checkbox to skip the default contact form 7 email.

05 Enable Password Field

If this checkbox is checked, the user can enter the password in the password field. You will have to select the password field from the dropdown.

06 User Approval Option

Admin can choose whether the registered user can directly access the login page or after admin approval.

07 Select User Role Field

Select the user role for user registration.

08 **Select Success URL**

Select the page, where the user will be redirected after successful registration.

Once you select all the fields for the Registration and Login form. You can add the Contact Form 7 Form shortcode to the page.

Add the Form Shortcode on page:

Once the settings are saved, add the form's shortcode to the desired page. The form should be the same that you have selected for the registration process. You can carry out the same process with the login form also.
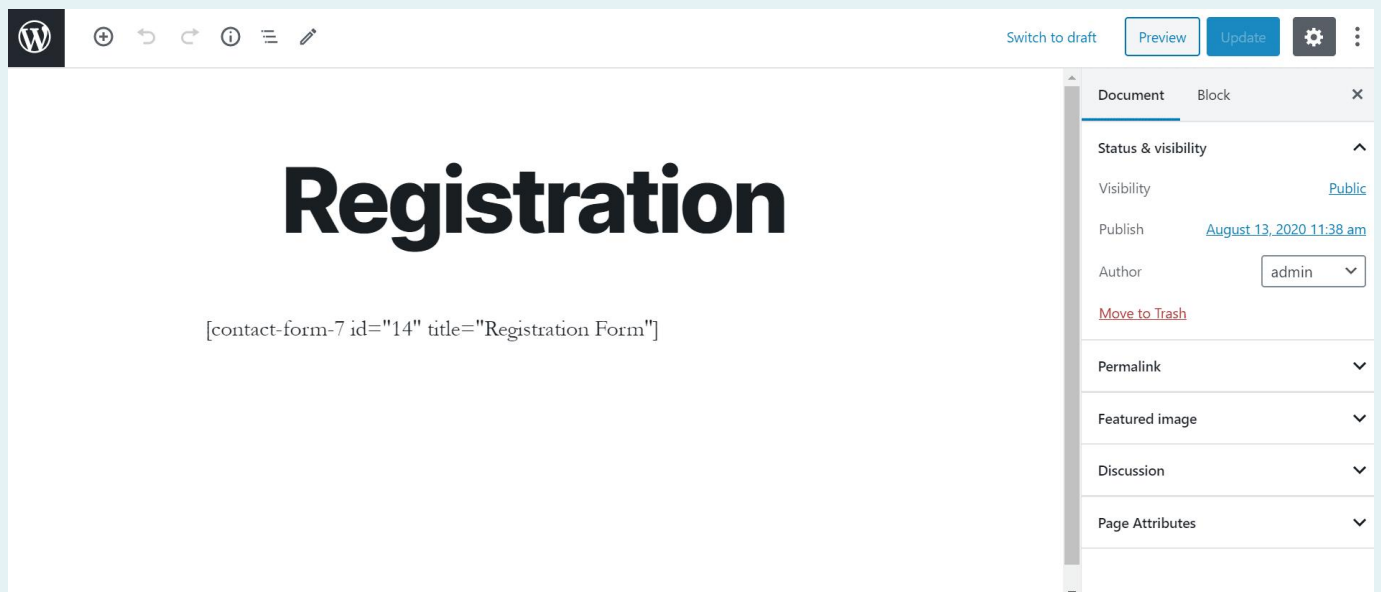

Advanced Custom Field Mapping:
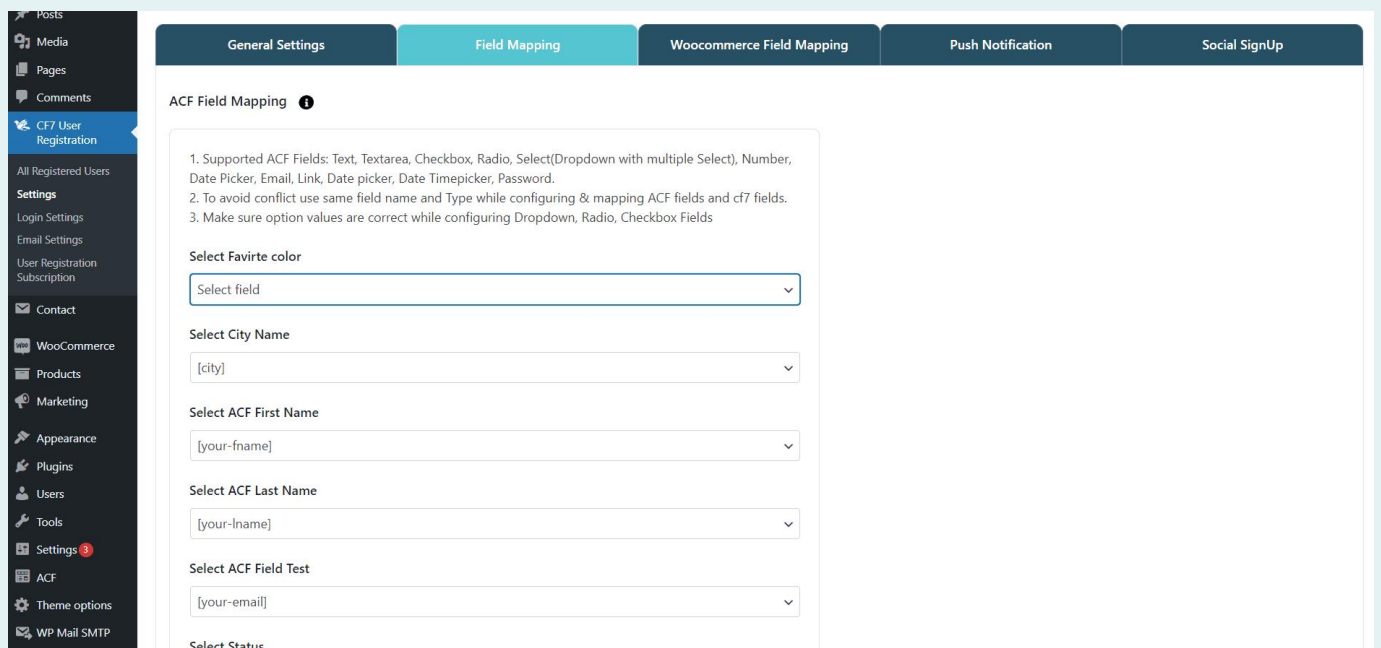

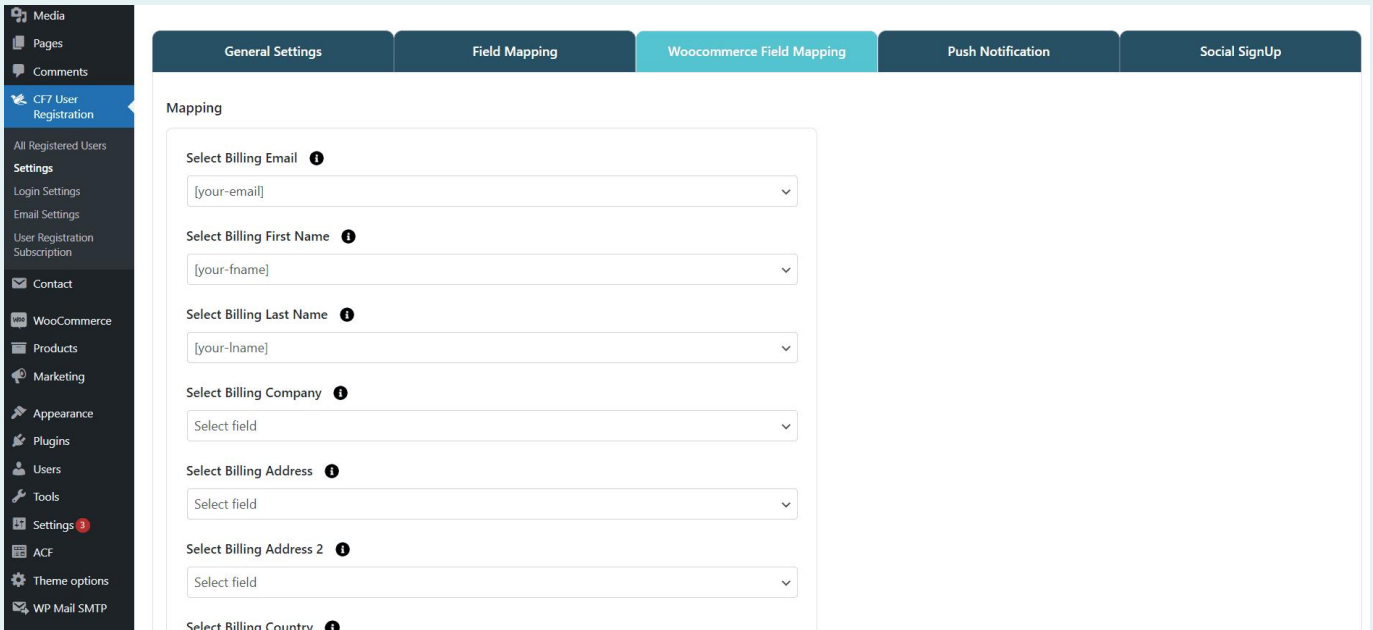

We only support Text, Textarea, Dropdown(with multi select), Date, Date time picker, URL(link), Email, Number Acf to map with cf7 fields

To map Acf Fields Checkbox, dropdown, radio field type and field names of cf7 fields and acf fields should be unique
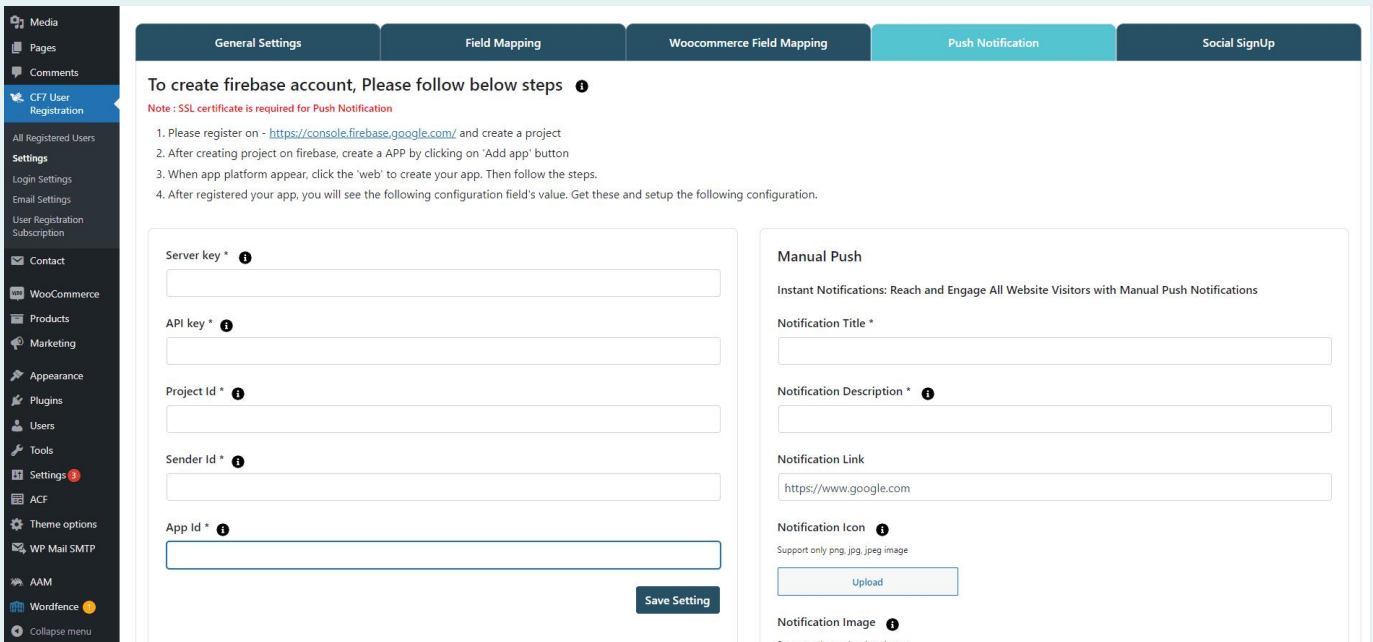

Also, to avoid conflict make sure number , size , labels and values of options are same
